AI Development Residency Week 2 Submission

Links

1. Figma
2. Notion
3. GitHub

What You Did

- Completed nonprofit strategy including theory of change and logic model
- Produced product requirements
- Built a backlog
- Created a Week 3 folder in GitHub repo
- Created a build plan
- Created a pitch deck

What You Learned

- Learned how to create a thought-partner skill that challenges my assumptions, asks before answering, and gives me options with trade-offs
- Learned how to push files to Figma and Notion via connectors
- Learned how to get Claude to preserve a record of which decisions belong to the community
- Learned how to talk honestly about the new market space my product occupies
- Learned how to account for the time and scope restraints of the residency in the product requirements as well as reflect on what I can do as a team of one
- Learned that I may need a different build plan to satisfy the following commitments of the project: community-owned, protocol-not-platform, un-capturable, and minimal retention
- Learned to create a backlog with Claude's help that is organized in a way I might actually use
- Learned how to get Claude to reconcile documents
- Learned that it apparently takes 10.5 hours to hit my session limit
